Product Description

Spiderbeam Aerial 51 LAMCO Barnsley
404-UL Ultra Lite Weight HF Antenna

Aerial 51 404-UL is an ultra lightweight, asymmetrical dipole for operation on 7 or 8 shortwave bands. It is constructed using very light, yet strong components. All hardware is stainless steel. The antenna radiator is made from CQ-534 insulated multi-strand copper-clad steel wire with 1mm outer diameter, which has very low wind load and weighs only 31gramm (!!) yet it still maintains a breaking strength of 10kg. The antenna comes including 12m coax which despite the low weight (only 185g) shows only very modest losses (< 1dB on 40m, < 2dB on 10m). The ultra lightweight matching unit not only matches the coax to the antenna, it also provides excellent choking resistance to suppress common mode current.

Ultra lightweight, asymmetrical dipole operating on 7 or 8 shortwave bands: Antenna length: approx. 21m - strung in Inverted-Vee style
Weight: only 400g (including balun and 12m long special low-loss coax !!)
